

ECOTEL[®]message SMbaSic

Send and receive SMS messages from any computer in your network using an e-mail program

SMbaSic allows you to use your e-mail program (e.g. Microsoft Outlook) to send SMS messages to individuals or groups.

Incoming SMS messages are automatically forwarded to the destination e-mail address. You can send and receive SMS messages from any computer in your network that is enabled for sending and receiving e-mails.

When sending an SMS message from your e-mail program, **SMbaSic** converts your e-mail into an SMS message and then transmits the message. You can send messages to existing Outlook contacts or use **SMbaSic** to configure groups. Incoming SMS messages are automatically converted into an e-mail and forwarded to the appropriate receiver (or group of receivers).

Besides sending and receiving SMS messages, mobile employees can also forward their e-mail to a mobile phone. This allows them to receive their e-mail in the form of SMS messages.

TECHNICAL OVERVIEW

SMbaSic - A convenient platform for SMS-based communication

SMbaSic allows you to effectively configure communications with your field employees or customers so that information can be exchanged quickly and cost-effectively in the form of SMS messages. The Benefits:

- No user training required since SMbaSic integrates with your standard e-mail software
- Increased efficiency for field employees with SmbaSic's well-organized (direct) messaging
- Improved customer contact with SMbaSic based on direct, up-to-date flow of information (e.g. with retailers or end customers)
- Fast and simple integration into existing systems with SmbaSic's e-mail interface (e.g. CRM system or building technology)
- No additional costs for further client licenses
- Easy installation using coordinated hardware and software components

Technical Data:

*SMbaSic can be installed on any PC that meets the following minimum requirements:

- Intel Pentium I, 10MB free harddisk space, 64MB RAM, CD-ROM, one free COM port
- Operating system Windows NT4.0/Windows 2000/Windows XP

In order to send and receive SMS messages, the VIERLING products ECOTEL® ISDN and ECOTEL® GSM3 are used. Alternatively, the GSM modem TC35 from SIEMENS can be used.

It is also possible to use other GSM modules that are equipped with a serial interface (V.24).
